COLOGNE, Germany. — Sept. 22, 2012 — Kolor and Seitz announce their partnership to enhance the compatibility of Seitz Roundshot VR Drive II motorized panoramic head and Kolor Autopano Giga image-stitching software.

Seitz Roundshot VR Drive II is a precise motorized panoramic head meant to automate the shooting of panoramic images, gigapixel panoramas and HDR images.

autopano giga

Kolor Autopano Giga is an image-stitching application compatible with Windows, Mac and Linux that automates the stitching of dozens, hundreds or thousands of images.

The application now includes a dedicated import plug-in for VR Drive II that pre-position the photos shot with the motorized head to guarantee an accurate stitching. Additionally, it enables direct creation of tone mapped panoramas (HDR fusion) or 32-bit HDR images with simultaneous stitching and mixing of bracketed images in 2 easy clicks.

A beta version of Autopano Giga 3.0 that integrates this plug-in is already available for download on Kolor's website.
